ON SARAWAK HETEROCEOUS LEPIDOPTERA.

Catalogue of the Heterocerous Lepidopterous Insects collected at Sarawak, in Borneo, by Mr. A. R. WALLACE, with Descriptions of New Species. By FRANCIS WALKER, Esq., F.L.S.

[Continued from page 145.]

Gen. PARASA, Moore.

200. PARASA HUMERALIS, n. s. Mas. Prasina, capite antico ochraceo, thorace maculis duabus lateralisbus fuscis, abdomen alisque posticus pallide testaceis, alis anticis basi ferrugineis fascia marginali ochracea.

Male. Bright leaf-green. Head ochraceous in front. Thorax with a brown spot on each side. Abdomen pale testaceous. Legs testaceous, partly ochraceous. Fore wings ferruginous at the base, with an ochraceous marginal band, which is widened towards the interior angle. Hind wings pale testaceous, with a ferruginous fringe. Length of the body 7 lines; of the wings 15 lines.

Closely allied to P. media and to P. Chloris.

Gen. NAROSA, Walk.

201. NAROSA VELUTINA, n. s. Mas. Ochracea, hirsuta, palpis extus nigris, antennis robustis nudis, alis anticis velutinis basi lineisque duabus flexis margineque pallidis, punctis marginalibus nigris.

Male. Dull ochraceous. Body hirsute. Palpi curved, slender, ascending, not rising higher than the vertex, black on the outer side. Antennae simple, very stout. Fore wings velvety, rounded at the tips, pale at the base, and with two bent, undulating, pale lines; costa and exterior border also pale, slightly convex, the latter rather oblique; marginal points black. Hind wings pale. Length of the body 4 lines; of the wings 10 lines.

Closely allied to N. conspersa.

Gen. NAPREPA, Walk.

202. NAPREPA ATTACOIDES, n. s. Mas. Rufescens, capite fusco, antennis late pectinatis, thorace fasciis duabus cinereis, alis anticis apice subrotundatis, lineis quatuor denticulatais indistinctis costaque ferrugineis, gutta discali cana elongata.

Male. Reddish. Head dark brown, with a white band between the antennae. Palpi porrect, very short. Antennae short, broadly pectinated. Thorax with two cinereous bands. Wings ample, thinly clothed; fringe partly cinereous; under side tinged with purple. Fore wings slightly rounded at the tips, with four indistinct denticulated ferruginous lines; costa ferruginous; discal dot hoary, elongated. Hind wings thickly clothed along the interior border. Length of the body 5 lines; of the wings 12 lines.

203. NAPREPA ALBICOLLIS, n. s. Mas. Rufescenti-cana, capite pe-
MR. F. WALKER ON HETEROCEROUS LEPIDOPTERA

dibusque rufescenti-ferrugineis, thorace antico albo, antennis late pectinatis, alis anticas lineis tribus lunulatis indistantis rufescenti-ferrugineis negro punctatis, alis posticas margine exteriore liturisque apud marginem interiorum rufescenti-ferrugineis.

**Male.** Reddish hoary. Head, palpi, and legs reddish ferruginous. Antennae very short, broadly pectinated. Thorax white in front. Fore wings acute, with three indistinct reddish-ferruginous lines which are composed of lunules, and are attended with elongated black points on the veins; exterior border rather oblique. Hind wings reddish-ferruginous along the exterior border; interior border with reddish-ferruginous marks; interior angle prominent. Length of the body 4 lines; of the wings 10 lines.

204. **NAPREPA ALBICPS, n. s.** Mas. Alba, antennis brevissimis late pectinatis, alis subpalinis lineis duabus denticulatis fuscis nigro punctatis, anticas striga obliqua basali plagisque duabus fuscis, posticas margine exteriore vix flexo fimbria flexa.

**Male.** White. Palpi extremely short. Antennae very short, broadly pectinated. Wings slightly opaline. Fore wings slightly acute, with two double denticulated lines, which are composed of brown lunules, and are accompanied by elongated black points; a brown oblique basal streak and two brown patches, one basal, the other on the fore part of the exterior border. Hind wings with lines much like those of the fore wings, the interior one nearly obsolete; exterior border very slightly bent; fringe brown. Length of the body 4 lines; of the wings 10 lines.

**Gen. SUSICA, Walk.**

205. **SUSICA BASALIS, n. s.** Mas. Subtestaceo-cana, nitens, palpis porrectis articulo 3° conico; antennis basi late pectinatis, alis anticas argenteo-sabulosis, extus fuscis macula diseali rufa negro marginata, spatio marginali rufescenti-ochraceo, alis posticas cervinis basi canis.

**Male.** Hoary, shining, slightly testaceous-tinged. Palpi porrect, extending rather beyond the head; 3rd joint conical. Antennae broadly pectinated to beyond one-third of the length. Fore wings acute, with silvery spangles, brown exteriorly, excepting the marginal space, which is reddish ochraceous; brown part oblique on the inner side, bordered on the outer side by an undulating black line, including a red, black-bordered discal spot. Hind wings fawn-colour, hoary towards the base. Length of the body 3½ lines; of the wings 8 lines.

206. **SUSICA CONGRA, n. s.** Mas. Cervina, antennis dimidio basali late pectinatis, alis anticas squamosis purpurascence tinctis nigro sub-conspersis linea recta obliqua ferruginea, alis posticas flavescentibus margine interiore cervino fimbriato.

**Male.** Fawn-colour. Palpi porrect, broad, obtuse; joints not distinguishable. Antennae broadly pectinated to half the length. Wings broad. Fore wings squamous, hardly acute, purplish-tinged, slightly
black-speckled; an oblique, straight, ferruginous middle line; costa straight; exterior border convex. Hind wings pale yellow, and fringed with fawn-colour along the interior border. Length of the body 5 lines; of the wings 12 lines.

**Gen. **Bethura, **n. g.**

**Mas. Corp**us er**r**atum. **Proboscis** obsoleta. **Palpi** robusti, erecti, pilosi, caput longe superantes, apice fasciculati. **Antennae** basi late pectinatae, apices versus serratae. **Abdomen** lineare, subcarinatum, alas posticas superans. **P**edes robusti, densissime fasciculati. **Alae** antice sat angustae, apice rotundatae, margine exteriore perobliquo; postice breves.

**Male.** Body very stout. **Proboscis** obsolete. Palpi stout, vertical, pilose, rising high above the head, densely tufted at the tips. **Antennae** broadly pectinated towards the base, serrated towards the tips. **Abdomen** linear, slightly keeled above, extending beyond the hind wings. **Legs** stout, most densely tufted to the tips of the tarsi. Fore wings rather narrow, somewhat rounded at the tips; costa straight; exterior border extremely oblique; veins very distinctly marked; 2nd inferior vein nearly twice as far from the 3rd as from the 1st. Hind wings very much shorter than the fore wings.

Allied to **Scopelodes**.

207. **Bethura minax**, **n. s.** **Mas.** Rufescens, abdomen ochraceo fasciis abbreviatis fasciculoque apicali nigris, alis antice cano subconspersis, posticis pallide luteis.

**Male.** Reddish. Abdomen ochraceous, with abbreviated black bands; 1st and 2nd bands interrupted; apical tuft black. Wings with the fringe hoary, shining. Fore wings minutely hoary-speckled. Hind wings pale luteous. Length of the body 8 lines; of the wings 18 lines.

**Gen. Altha, **n. g.**

**Mas. Corp**us crassum. **Proboscis** obsoleta. **Palpi** minus. **Antennae** triente basali late pectinatae. **Abdomen** alas posticas superans. **P**edes robusti, dense fasciculati. **Alae** subvestitae; antice apice rotundatae, costa recta, margine exteriore convexo sat obliqua.

**Male.** Body thick. **Proboscis** obsolete. Palpi very minute. **Antennae** broadly pectinated to a little beyond one-third of the length, simple from thence to the tips. **Abdomen** extending beyond the hind wings. **Legs** stout, thickly tufted. Wings moderately broad, thinly clothed. Fore wings somewhat rounded at the tips; costa straight; exterior border convex, rather oblique; 3rd inferior vein rather remote from the 2nd, which is very near the 1st.

208. **Altha nivea**, **n. s.** **Mas.** Nivea, alis anticis puncto discali punctoque marginali nigris.

**Male.** Pure white. Fore wings with an elongated black point at the
base of the 1st inferior vein, and with another on the exterior border.
Length of the body 7 lines; of the wings 14 lines.

Gen. Darna, n. g.

Mas. Corpus robustum. Proboscis obsoleta. Palpi porrecti, sat va-

lidi, caput paullo superantes; articulus 3\textsuperscript{ra} parvus, conicus. Antenna\ae breviusculae, pectinate. Abdomen alas posticas non superans, fasci-
culo apicali sat magno. Pedes robusti, pilosi. A\textae latiusculae, brevi-

usculae.

stout, extending a little beyond the head; 3rd joint minute, conical.
Antennae rather short, moderately pectinated. Abdomen not extending
beyond the hind wings; apical tuft rather large. Legs stout, pilose. Wings rather broad and short. Fore wings acute; costa straight; exterior border hardly oblique; the four inferior veins ap-

proximate.

209. Darna plana, n. s. Mas. Nivea, alis anticus pallidissime cervi-
nis, dimidio postico niveo, linea exteriore et atomis nigris, alis posticis
subtestaceo tinctis margine exteriore pallidissime cervino.

Male. Pure white. Fore wings very pale fawn-colour, except for half
the breadth along three-fourths of the length; an exterior line com-
posed of black speckles, parallel to the exterior border, and hardly
apparent except on the costa and by the interior border. Hind wings
with a very slight testaceous tinge; exterior border very pale fawn-

colour. Length of the body 3\frac{3}{4} lines; of the wings 9 lines.

Gen. Arrhapa, n. g.

Mas. Corpus robustum. Proboscis obsoleta. Palpi porrecti, sat gra-
ciles, caput vix superantes; articulus 3\textsuperscript{ra} conicus, minimus. Antenna

\ae subpectinate. Abdomen alas posticas vix superans. Pedes brevius-
culi, l\v{e}ves, sat graciles; tibiae posticae calcaribus duobus apicalibus,
uno longissimo. A\textae latae, non longae; anticae acute, costa subconvexa,
margine exteriore recto.

Male. Body robust. Proboscis obsolete. Palpi porrect, not thick,
hardly extending beyond the head; 3rd joint conical, very minute.
Antennae slightly pectinated, moderately long. Abdomen hardly ex-
tending beyond the hind wings. Legs rather short, not stout nor
pilose; hind tibiae with two apical spurs, one of which is very long.
Wings broad, not long. Fore wings acute, slightly and transversely
rugulose; costa slightly convex; exterior border straight, very slightly
oblique; 3rd inferior vein very near the 2nd.

210. Arrhapa frontalis, n. s. Mas. Lateritia, capite thoraceque
antico ferrugineo-fuscis, abdomen alisque posticis albidis, alis antici
lineis quinque undulatis transversis spatioque exteriore costali purpu-
rascenti-fuscis, fimbria purpurascente.

**Male.** Brick red. Head and fore part of the thorax dark ferruginous
brown. Abdomen and hind wings whitish. Fore wings with five
undulating transverse purplish-brown lines; space along the exterior
half of the costa and on one-third of the breadth purplish brown;
fringe purplish. Length of the body 6 lines; of the wings 14 lines.

**Gen. Birthama, n. g.**

**Mas.** Corpus robustum. Proboscis obsoleta. Palpi porrecti, sub-
cylindrici, non pilosi, caput sat superantes, articulo 3° conico parvo.
Antennae simplices. Abdomen alas posticas non superans, fasciculo api-
cali minimo. Pedes breves, robusti, pilosi; tibiae postice calcarius
quatuor longis. Alae spisse, latiusculae, non longae; antice apice
rotundatae.

**Male.** Body robust. Proboscis obsolete. Palpi porrect, nearly cylin-
drical, not pilose, extending rather far beyond the head; 3rd joint
conical, minute, not more than one-fourth of the length of the 2nd.
Antennae simple, moderately long and stout. Abdomen not extending
beyond the hind wings; apical tuft very small. Legs short, stout,
pilose; hind tibiae with four long spurs. Wings dense, rather broad,
not long. Fore wings rounded at the tips; costa straight; exterior
border convex, rather oblique; interior angle very much rounded;
3rd inferior vein rather remote from the 2nd.

211. Birthama obliqua, n. s. **Mas.** Rosae, abdomen pedibusque
ochraceo-rufis, alis antecis linea diffusa obliqua nigrante, alis postecis
roseo-cinereis margine exteriore roseo.

**Male.** Rosy red. Abdomen and legs more ochraceous. Fore wings
with a diffuse oblique blackish line, which extends from one-third of
the length of the interior border to the tips; under side without mark-
ings. Hind wings cinereous, with a rosy tinge and with a rosy-red
exterior border. Length of the body 6 lines; of the wings 16 lines.

**Fam. Drepanulidae, Boisd.**

**Gen. Drepana, Sch.**

212. Drepana quadripunctata, n. s. **Mas.** Testacea, antennis
rufescenibus late pectinatis, alis linea exteriore subobscurore lunu-
lata denticulata, puncto discali nigro, alis antecis falcatis striga apicali
nigra.

**Male.** Testaceous. Antennae reddish, broadly pectinated. Abdomen
whitish testaceous. Wings with the exterior line rather darker than
the ground-hue, lunulate and denticulated, most distinct in the fore
wings, where it terminates in a black apical streak; discal point black.
Fore wings falcate, with the middle and interior lines irregular, less distinct than the exterior line; the middle line obsolete, except towards the costa. Length of the body 3 lines; of the wings 10 lines.

213. Drepana micacea, n. s. Mas. Ferrugineo-ochracea, antennis latissime pectinati, alis chalybeo conspersis linea nigra recta diffusa duplicata, fimbria apice nigra, alis anticis falcatis litura discali nigra. Male. Ferruginous ochraceous, paler beneath. Antennae very broadly pectinated. Wings with chalybeous spangles, and with a black diffuse double line which extends from the tips of the fore wings to beyond the middle of the inner border of the hind wings, and is single on the under side; fringe black-tipped, chalybeous-spangled. Fore wings falcate, with a black discal mark; this is most distinct on the under side, where the black line is accompanied by another lighter and less exterior line. Length of the body 4 lines; of the wings 12 lines.

Fam. Bombycidæ, Steph.

Gen. Gastropacha, Ochs.

Inhabits also Hindostan, Ceylon, and China.

Gen. Megasoma, Boisd.

Male. Fawn-colour, woolly, very densely clothed, more brownish beneath. Head and fore part of the thorax dark ferruginous brown. Antennae pale. Abdomen extending far beyond the hind wings; apical tuft chalybeous black. Fore wings dark-ferruginous brown, with a purplish tinge, and with four indistinct blackish lines; submarginal line composed of black cinereous-speckled dots, of which one on the interior border is much larger than any one of the others; a white point on the interior part of the disk, and an ochraceous spot very near the base. Hind wings very woolly. Length of the body 15 lines; of the wings 30 lines.

Gen. Gunda, n. g.

ample, spissæ; antice costa apicem versus obliqua, margine exteriore undulato; postice apicem subtruncatae, margine interiore dense fimbriato.

**Male.** Body very thick, woolly, densely clothed. Proboscis obsolete. Palpi porrect, short, very slender, not extending beyond the head. Antennæ short, very broadly pectinated. Legs stout, very densely pilose. Wings ample, dense. Fore wings with the costa deflexed towards the tips, which are rounded; exterior border undulating. Hind wings somewhat truncated at their tips; interior border densely fringed.

216. **GUNDA OCHRACEA**, n. s. **Mas.** Ochracea, alis anticeis margine obscuriorque, alis posticis subpallidorubis marginis interioris fimbria albida.

**Male.** Ochraceous. Fore wings somewhat darker along the interior border and towards the exterior border. Hind wings a little paler and brighter than the fore wings, with a whitish fringe along the interior border. Length of the body 10 (?) lines; of the wings 28 lines.

**Fam. COSSIDÆ, Neom.**

**Gen. ZEUZERA, Latr.**

217. **ZEUZERA RORICYNÆA**, n. s. **Mas.** Alba, capite antico nigro, antennis ochraceis apice nigris, abdomine e guttis cyanis quadrilineato, alis antice cyano guttatis et punctatis, alis postice guttis duebus marginalibus cyanis.

**Male.** White. Head black in front. Antennæ ochraceous, broadly pectinated, black and simple towards the tips. Abdomen extending far beyond the hind wings, with four rows of metallic-blue dots. Knees and tarsi with blue marks. Fore wings with numerous bright blue points and dots on the veins. Hind wings with two connected blue dots on the exterior border, near the interior angle. Length of the body 10 lines; of the wings 20 lines.

**Gen. DEGIA, n. g.**

**Mas et Fam.** Corpus robustum. Proboscis obsoleta. Palpi minimi. Abdomen alas posticas superans. Pedes breves, sat gracies; tibiae posticae quadricalcaratae. Alaæ sat angustæ; antica apice rotundatae, margine exteriore perobliquo. **Mas.** Antennæ late pectinatae, spicæ serratae. **Fam.** Antennæ serratae.

**Male and Female.** Body robust. Proboscis obsolete. Palpi very minute. Abdomen extending more or less beyond the hind wings. Legs short, rather slender; hind tibiae with four moderately long spurs. Wings rather narrow. Fore wings rounded at the tips; costa straight; exterior border very oblique, interior angle much rounded. **Male.** Antennæ broadly pectinated, except towards the tips, where they are
serrated. **Female.** Antennaæ serrated. Abdomen extending much beyond the hind wings.

218. **Degia imparata**, n. s. **Mas et Fem.** Sordide alba, antennis maris triente apicali serratis, alis anticis strigis transversis nigricantis, sese interruptis.

**Male and Female.** Dingy white. Antennaæ of the male pectinated to much beyond half the length. Abdomen of the male clothed with long hairs. Fore wings with slight, transverse, partly interrupted, blackish streaks. Length of the body 8-9 lines; of the wings 16 lines.

219. **Degia deficiens**, n. s. **Mas.** Sordide alba, antennis maris apice serratis, alis anticis strigis transversis fuscis plus minusve interruptis.

**Male.** Dingy white. Antenna pectinated nearly to the tips. Abdomen clothed with long hairs. Fore wings with many slight, transverse, more or less interrupted, brown streaks. Length of the body 4-5 lines; of the wings 12-14 lines.

This species much resembles the preceding one, but may be distinguished by its smaller size and by the different structure of the antennaæ.

Fam. Cymatophoridae, **Herr.-Sch.**

Gen. Thyatira, **Ochs.**

220. Thyatira magniplaga, **Walk. Cat. Lep.** 3rd ser. 1643.

Fam. Bombycoidea, **Guen.**

Gen. Diphthera, **Ochs.**

221. Diphthera Jucunda, n. s. **Fem.** Glauco-viridis, thorace fascia nigra albo marginata, abdomen punctis lateralisibus nigris, alis anticis lineis quatuor integris lineaeque costali flexa lituram discalem includente nigris denticulatis albo marginatis, alis posticis cinereis fusco latissimae marginatis.

**Female.** Glauco-green. Palpi ascending, black above and at the tips; 3rd joint hardly one-third of the length of the 2nd. Thorax with a black white-bordered band. Abdomen with black points along each side. Fore wings with four denticulate black white-bordered lines; 3rd line double, including a white space; two other lines forming a loop from the costa, and enclosing the black transversely oblong white-pupilled discal mark; marginal line composed of elongated black white-bordered dots; fringe with blackish marks. Hind wings cinereous, with a very broad brown marginal band; exterior border and fringe as in the fore wings. Length of the body 7 lines; of the wings 16 lines.

Gen. Acronycta, **Ochs.**

222. Acronycta Rubiginosa, n. s. **Fem.** Rubiginoso-cineræ, abdomine pallide cinereo, alis anticis lituris costalibus fuscis striga ob-
liqua vittaque dentata subinterrupta discalibus nigris, linea exteriore
e lituris cuneatis, linea submarginali albidâ angulosa, punctis marginalibus nigris, alis posticis albis.

*Female.* Cinereous. Head, thorax, and fore wings tinged with rust-colour. Abdomen pale cinereous. Fore wings with brown marks along the costa, with a small oblique black discal streak, and with a black hindward stripe which is irregularly dentate and is almost interrupted in the middle; exterior line black, much bent, composed of cuneiform marks; submarginal line whitish, deeply zigzag; marginal points blackish. Hind wings white, slightly cinereous along the exterior border. Length of the body 9 lines; of the wings 20 lines.

**Fam. LEUCANIDÆ, Guen.**

**Gen. LEUCANIA, Hüb.**

*Male and Female.* Pale cinereous fawn-colour. Abdomen whitish towards the base. Wings with black marginal points. Fore wings thinly and minutely black speckled, whitish along the costa, with a darker fawn-coloured discal stripe which includes a white lanceolate hooked streak, the latter continued by a whitish slender line to the exterior border; 3rd inferior vein black-speckled. Hind wings white towards the base and along the interior border. Length of the body 8 lines; of the wings 16–18 lines.

*Male.* Pale testaceous. Abdomen whitish towards the base. Fore wings with dull rosy streaks between the veins; the latter with white lines, of which one in the disk is more conspicuous than the others, and has on its hinder side a black point formed by confluent speckles, and terminates in a diffuse brown mark at the base of the 1st and 2nd inferior veins; exterior line curved, composed of blackish points; marginal points black, minute. Hind wings white; marginal points brownish, indistinct. Length of the body 7 lines; of the wings 14 lines.

*Male.* Pale testaceous. Abdomen paler than the thorax. Fore wings
with indistinct brownish streaks between the veins, the latter with white lines as in the preceding species; discal line accompanied along its hinder side towards the base by a short, slight, black line, and contiguous in front at its tip to a diffuse brown mark; exterior line, marginal points, and hind wings as in the preceding species. Length of the body 7 lines; of the wings 15 lines.

This species very closely resembles L. roseilinea, and there may be connecting links between them; the chief difference is in the discal brown mark, which is not beyond but in front of the end of the white line.

**Male.** Pale testaceous. Palpi not rising so high as the vertex; 2nd joint curved; 3rd lanceolate, less than half the length of the 2nd. Antennae minutely setulose and pubescent. Abdomen rather long, extending a little beyond the hind wings. Legs rather slender; spurs very long. Wings short, rather broad. Fore wings acute, with some indistinct ferruginous lines towards the base, and with a very incomplete submarginal line composed of blackish cinereous dots; costa straight; exterior border very slightly convex, rather oblique. Length of the body 5 lines; of the wings 10 lines.

**Gen. Nonagria, Ochs.**

227. Nonagria seticornis, n. s. Fam. Murina, corpore subitus albido, palpis ascendentibus articulo 3° parvo, antennis subpubescentibus subsetulosis, alis anticus latiusculis fusco conspersis 'apice rotundatis, lineis duabus fuscis denticulatis subundulatis, linea submarginali punctisque marginalibus nigricantibus, fimbria albida, alis posticis fuscis.

**Female.** Mouse-colour. Body whitish beneath. Palpi ascending, slightly curved, not rising higher than the vertex; 3rd joint conical, minute, less than one-fourth of the length of the 2nd. Antennae minutely pubescent and setulose. Abdomen extending a little beyond the hind wings; hind borders of the segments and tip white. Wings rather broad, not long. Fore wings rounded at the tips, brownspeckled; interior and exterior lines brown, slender, denticulated, slightly undulating; submarginal line and marginal points blackish; fringe whitish; costa slightly convex; exterior border convex, rather oblique. Hind wings brown. Length of the body 6½ lines; of the wings 14 lines.

This species may form a new genus.

**Gen. Bessara, n. g.**

**Mas.** Corpus crassum. Proboscis distincta. Palpi oblique ascenden-
tes, verticem non superantes, articulo 3º parvo conico. Antennae sub-pubescentes. Abdomen alas posticas non superans. Pedes breviusculi, sat gracies, femoribus tibiiisque late fimbriatis, calcaribus quatuor longis. Alae latiusculae, breviusculae; antice apice rectangulatae, margine exterioe non obliquo.

Male. Body very stout. Proboscis distinct. Palpi obliquely ascending, not rising so high as the vertex; 3rd joint conical, about one-fourth of the length of the 2nd. Antennae minutely pubescent. Abdomen not extending beyond the hind wings. Legs rather short and slender; femora and tibiae broadly fringed; hind tibiae with four long spurs. Wings broad, rather short. Fore wings acutely rectangular, costa quite straight; exterior border hardly convex, not oblique.

Male. Cinereous reddish. Pectus white, shining. Abdomen cinereous. Wings with a rosy fringe. Fore wings with the interior and exterior lines cinereous, zigzag, very indistinct; submarginal line composed of brown marks; marginal points blackish, indistinct. Hind wings cinereous brown; interior border fringed with long whitish hairs. Length of the body 7 lines; of the wings 16 lines.

Gen. Didigua, n. g.

Female. Body moderately stout. Proboscis distinct. Palpi ascending, not rising so high as the vertex; 2nd joint slightly curved; 3rd joint conical, very minute, less than one-sixth of the length of the 2nd. Antenne very minutely setulose. Abdomen extending a little beyond the hind wings. Legs smooth, rather short and stout; hind tibiae with four very long spurs. Wings rather broad, not long. Fore wings rounded at the tips; costa very slightly convex; exterior border slightly convex, moderately oblique.

Female. Brownish cinereous. Body whitish beneath. Fore wings
with the interior, exterior, and submarginal lines purplish, diffuse, undulating; exterior line indistinctly double on the exterior side; the supplementary line very diffuse; under side with a blackish disk. Hind wings brown, mostly tinged with metallic blue. Length of the body 7 lines; of the wings 14 lines.

Fam. GLOTTULIDÆ, Gعون.

Gen. Bélciána, n. g.

Mas. Corpus robustum. Proboscis distincta. Palpi longiusculi, oblique ascendentes; articulus 2⁰ crassus; 3⁰ linearis, gracilis, 2⁰ dimidio longior. Antennae nude. Abdomen alas posticas paullo superans. Pedes validi, dense fimbriati; tibiae posticae calcarius quatuor longissimis. Ala amplex; anticae acutae, costa recta, margine exterior convexo.

Male. Body stout. Proboscis distinct. Palpi obliquely ascending, rather long; 2nd joint thick; 3rd linear, slender, much shorter than the 2nd. Antennae simple. Abdomen extending a little beyond the hind wings. Legs stout; femora and tibiae densely fringed; hind tibiae with four very long spurs. Wings ample. Fore wings acute; costa straight; exterior border convex, moderately oblique.

Gen. Zígera, n. g.

Mas. Corpus robustum. Proboscis brevissima. Palpi compressi, vix arcuati, verticem paullo superantes; articulus 3⁰ lanceolatus, 2⁰ dimidio fere longior. Antennae subpubescentes. Abdomen alas posticas non superans, fasciculo apicali parvo. Pedes brevissculi; genua intermedia penicillata; tibiae posticae calcarius quatuor longis. Ala late, non longae; anticae vix acutae, costa recta, margine exterior subconvexo.

Male. Body robust. Proboscis very short. Palpi ascending, compressed, very slightly curved, rising rather higher than the vertex; 3rd joint lanceolate, full half the length of the 2nd. Antennae very minutely pubescent. Abdomen not extending beyond the hind wings; apical tuft small. Legs rather short, moderately stout; middle knees with a fan-shaped tuft of hairs; hind tibiae with four long spurs. Wings broad, not long. Fore wings hardly acute; costa straight; exterior border slightly convex, very slightly oblique.

This genus has some likeness to Aquis, but hardly associates with any of the established families of Noctúrites.

231. Zígera orbífera, n. s. Mas. Ochracea, alis punctis marginalibus nigris elongatis duplicatis, alis anticus nigrantes substriatus lineis duabus arcuatibus albis, spatio inter medio fusco albo-consperso lituram
stram includente, linea submarginali nigrante diffusa indeterminata, alis posticis fascis nonnullis undulatis nigrlicantibus fasciaeque media albida.

**Male.** Ochraceous; under side and legs paler. Tuft on the middle knees ochraceous. Wings with black double elongated marginal points. Fore wings diffusely and indistinctly blackish-streaked, with two transverse curved white lines which are nearest to each other on the costa and on the interior border; space between the lines containing nearly half the surface of the wing, brown, white-speckled, including a transverse deep-black discal mark; submarginal line blackish, diffuse, very incomplete. Hind wings with some diffuse undulating black or blackish bands, and with a more diffuse whitish middle band. Length of the body 6 lines; of the wings 12 lines.

**Gen. Brana, n. g.**

**Mas.** Corpus robustum. Proboscis distincta. Palpi verticem non superantes; articulus 2° subarcuatus; 3° linearis, apice rotundatus, 2° dimidio non longior. Antennae subsetulose. Abdomen albas postic as vix superans; fasciculus apicalis parvus. Pedes robusti; femora fimbriata; femora antica penicillata; tibiae posticae calcaribus quattuor longis. Alae antice apice rectangulatae, costa recta, margine extero subconvexo subdentato.

**Male.** Body stout. Proboscis distinct. Palpi ascending, not rising higher than the vertex; 2nd joint slightly curved; 3rd linear, rounded at the tip, about half the length of the 2nd. Antennae minutely setulose. Abdomen hardly extending beyond the hind wings; apical tuft small. Legs stout; femora fringed; fore femora with a penicillate tuft of long hairs; hind tibiae with four long spurs. Wings moderately broad. Fore wings rectangular at the tips; costa straight; exterior border minutely dentate, slightly convex and oblique.

232. **Brana Polychroma, n. s.** Mas. Cinerea, alis anticis seneis viridescentibus nigro conspersis, lineis interiore et submarginali nigris, 1° undulata; 2° interrupta et dilatata, fascia latissima spatique costali apicali albidis, alis posticis pallide cinereis, fascia margineque extero obscurioribus.

**Male.** Cinereous. Fore wings seneous, with various iridescent tints; speckles and markings black; markings chiefly consisting of the interior and submarginal lines, of which the first is undulating, and the 2nd is here and there interrupted and dilated; a very broad whitish band, much straitened in front; an oblong whitish space along the apical part of the costa, containing a brown spot and part of the submarginal line. Hind wings pale cinereous; a band and the exterior border darker. Length of the body 8 lines; of the wings 18 lines.

**Gen. Urbona, n. g.**

**Mas.** Corpus robustum. Proboscis brevis. Palpi graciles, breves,
verticem paullo superantes; articulus 2\textsuperscript{a} vix arcuatus; 3\textsuperscript{a} lanceolatus, 2\textsuperscript{d} dimidio longior. Antennae subpubescentes. Abdomen albas posticas paullo superans, apicem versus subcompressum; fasciculus apicalis deflexus. Pedes validi, laeves; tibiae postice calcariibus quatuor longissimis. Alae antice apice subrotundate.

**Male.** Body stout. Proboscis short. Palpi slender, smooth, rising a little higher than the vertex; 2nd joint hardly curved; 3rd lanceolate, more than half the length of the 2nd. Antennae very minutely pubescent. Abdomen extending a little beyond the hind wings, slightly compressed towards the tip; apical tuft diverging. Legs stout, smooth; hind tibiae with four very long spurs. Wings moderately broad. Fore wings somewhat rounded at the tips; costa straight; exterior border convex, rather oblique.

**Male.** Whitish, dark cinereous beneath. Fore wings minutely and irregularly blackish-speckled, with an indistinct white slightly brown-bordered line, which extends from the tips to the base of the interior border; marginal points black, minute. Hind wings dark cinereous. Length of the body 7 lines; of the wings 14 lines.

**Fam. APAMIDÆ, Guen.**

**Gen. Savara, n. g.**

**Male.** Body robust. Antennæ slightly and equally pectinated. Abdomen extending somewhat beyond the hind wings. Legs stout, rather long; hind tibiae with four spurs; one of the apical spurs very long. Wings rather long, moderately broad. Fore wings acute; costa straight; exterior border slightly convex, rather oblique; interior angle much rounded.

Allied to *Nepheleodes*.

**Male.** Reddish fawn-colour. Abdomen and underside mostly cinereous. Fore wings with two darker, undulating, very indistinct transverse lines, and with a submarginal line of elongated blackish dots; reniform mark a little paler than the ground-hue, indicated also by two
still paler points. Hind wings brown. Length of the body 7 lines; of the wings 16 lines.

**Gen. Dipterygia, Steph.**

235. **Dipterygia vagivitta, n. s.** Mas. Fusca, cinereo subconspersa, alis antecis lunulis transversis lineisque exterioribus abbreviatis nigris indistinctis, costa apicali albo punctata, vitta postica alba informi nigro marginata, fimbria albido notata, alis posticis pallidioribus, fimbrvia albida fusco interlineata.

**Male.** Brown, slightly cinereous-speckled. Abdomen cinereous. Fore wings with transverse lunules and with short exterior lines black, indistinct; some white points along the apical part of the costa, and some whitish marks on the fringe; an irregular white partly black-bordered stripe along the interior border. Hind wings paler brown; fringe whitish, interlined with brown. Length of the body 7–8 lines; of the wings 16–18 lines.

This species has a remarkable resemblance to the European *D. Pinastri*, but does not agree with it in several characters, of which the most conspicuous is the different outline of the pale part about the interior angle of the fore wings.

**Gen. Prodenia, Guén.**

236. **Prodenia infecta, Walk. Cat. Lep.** 3rd ser. i. 96.
Inhabits also Hindostan.

**Female.** Pale cinereous testaceous. Abdomen pale cinereous. Fore wings diffusedly and indistinctly blackish-speckled, some of the speckles forming very indistinct transverse curved lines, of which one is exterior and more conspicuous than the others; discal dot black. Hind wings whitish. Length of the body 5 lines; of the wings 12 lines.

**Gen. Mamestra, Ochs.**

238. **Mamestra prodita, n. s.** Mas. Nigriganti-cinerea, palpis vix arcuatis articulo 3° minimo, abdomen cristi nigricantibus, alis antecis lineis variis nigris angulosis indistinctis, orbiculari et reniformi albidis, hac annulum nigrum includente, alis posticis albido-cinereis fusco late marginatis.

**Male.** Blackish cinereous. Palpi ascending, very slightly curved; 3rd joint conical, not one-sixth of the length of the 2nd. Abdomen cinereous, with blackish crests. Fore wings with various transverse zigzag indistinct black lines; orbicular and reniform marks whitish, nearly round, the latter including a black ringlet. Hind wings whitish.
cinereous, with a broad brown border. Length of the body 5 lines; of the wings 12 lines.

This species very closely resembles *M. Brassicae*.

239. **Mamestra albisparsa**, n. s. *Mas.* Nigranti-cinerea, palporum articulo 3° longiconico, antennis subpubescentibus, abdomen alas posticas superante, pedibus densissime pilosis, alisanticis lineis nigris undulatis indistinctis, reniformi alba nigro pupillata et margi nata, striga exterioire obliqua alba, linea submarginali alba denticulata, punctis marginalibus nigris.

**Male.** Blackish cinereous. Third joint of the palpi elongate-conical, less than one-fourth of the length of the 2nd. Antennae very minutely pubescent. Abdomen cinereous, extending beyond the hind wings. Legs very densely clothed. Fore wings with indistinct transverse black undulating lines; reniform mark white, obliquely oblong, black-pupilled and bordered, contiguous to an oblique white streak, which is about twice its length; submarginal line white, denticulated; marginal points black. Hind wings cinereous; marginal line brown. Length of the body 8 lines; of the wings 18 lines.

Fam. **NOCTUIDAE**, Guén.

Gen. **Agrotis**, Ochs.

240. **Agrotis inconclusa**, n. s. *Mas.* Rufescenti-cinerea, palporum articulo 2° lato subarquato, 3° minimo, antennis subpectinati apice nudis, abdomen fasciculo apicali spioso, tarsis basi tibisque late fimbriatis, alis antici nigro conspersis rufescente subnotatis, lineis duabus fuscis, 1° angulata subdenticulata, 2° obliqua denticulata, fascia exteriori fuscescente lineam e lunulis albis includente, puncto discali punctisque duobus basalibus nigris.

**Male.** reddish cinereous. Palpi ascending; 2nd joint broad, slightly curved; 3rd conical, extremely minute. Antennae slightly pectinated, bare towards the tips. Abdomen with a large dense apical tuft. Tarsi towards the base, and tibiae, broadly fringed. Wings with black marginal points. Fore wings indistinctly reddish-mottled, minutely black-speckled; interior and exterior lines brown, remote from each other; the 1st angular, slightly denticulated; the 2nd oblique, regularly denticulated, having along its outer side a brownish band, including a whitish line, composed of lunules, and along its inner side a row of brown points; a black discal point and two black points very near the base, one of them on the costa. Length of the body 8 lines; of the wings 18 lines.

Male. Cinereous. Head, thorax, and fore wings slightly tinged with wood-colour. Palpi ascending; 2nd joint hardly stout, very slightly curved; 3rd elongate-conical, hardly one-fourth of the length of the 2nd. Antennæ stout, serrated; the teeth pubescent. Thorax with a brownish band. Abdomen with a small apical tuft. Legs slightly pilose, not fringed. Wings with black marginal points. Fore wings with a brown basal mark; interior, exterior, and submarginal lines brown, slight, zigzag, the latter accompanied by a cinereous line; orbicular and reniform marks brown, irregular. Hind wings whitish. Length of the body 7 lines; of the wings 16 lines.

Fam. ORTHOSIDÆ, Guén.

Gen. THALATHA, n. g.

Male. Body stout. Proboscis moderately long. Palpi rather slender, ascending, slightly curved, applied to the front; 3rd joint lanceolate, less than half the length of the 2nd. Antennæ simple. Abdomen crested, hardly extending beyond the hind wings. Legs rather short and stout; tibiae slightly fringed; hind tibiae with four long spurs. Wings moderately broad. Fore wings somewhat rounded at the tips; costa straight; exterior border convex, slightly oblique.

Var. Fore wings with an irregular angular olive-coloured band, whose hind part is very oblique.

Gen. BARBESOLA, n. g.

Male. Body stout. Proboscis distinct. Palpi porrect, compressed, extending beyond the head; 2nd joint broad; 3rd extremely minute. Antennæ long, slender, very minutely pubescent. Abdomen slightly keeled, hardly extending beyond the hind wings; apical tuft small, compressed. Legs stout; tibiae dilated; middle tibiae furnished at the base with a fan-shaped tuft of hairs which equal the tibiae in length; hind tibiae with four spurs of moderate length. Wings moderately broad; fringe long. Fore wings somewhat rounded at the tips; costa straight; exterior border convex, moderately oblique.

**Male.** Fawn-colour. Head, thorax, and fore wings slightly iridescent or suffused with dove-colour. Fore wings with irregular black speckles, some of which indicate very incompletely the interior and exterior lines, and form the nearly round reniform mark; a black dot near the base; marginal lunules brown. Hind wings with an seneous tinge. Length of the body 5 lines; of the wings 12 lines.

**Gen. Dabarita, Walk.**

Inhabits also Hindostan.

**Gen. Chora, n. g.**

**Fam.** Corpus crassum. Proboscis brevis. Palpi ascendentes, verticem non superantes; articulus 2" subarcuatus; 3" minimus. Antennae glabrae. Abdomen depressum, alas posticas paulo superans. Pedes breves, robusti; tarsi spinosi. Abe latiusculae; anticae rectangulatae, costa basi convexa, margine exteriore subflexo.

**Female.** Body very stout. Proboscis short. Palpi ascending, not rising higher than the vertex; 2nd joint slightly curved; 3rd extremely minute. Antennae bare. Abdomen somewhat depressed, extending a little beyond the hind wings. Legs short, stout; tarsi spinose; hind tibiae with four long spurs. Wings rather broad. Fore wings rectangular, but hardly acute at the tips; costa convex towards the base; exterior border slightly bent in the middle, oblique hindward.

Allied to Dabarita.

245. Chora repandens, n. s. Fam. Obscure rufescenti-fusca, sub-tus rufescens, alis anticis cinereo-purpurascente suffusis, linea interiore subdentulata vix obliqua, linea exteriore recta cinerca fusco marginata non obliqua, disco subitus nigricante, alis posticis sene fuscis.

**Female.** Dark-reddish brown, cinereous beneath. Abdomen mouse-colour, reddish along each side and at the tip, brighter red towards the tip beneath. Fore wings mostly suffused with purplish cinereous; this hue is intersected by a nearly upright, slightly denticulated interior line; exterior line straight, upright, cinereous, bordered with brown on the outer side; under side blackdish, red towards the exterior border and along the costa. Hind wings seneous brown, red beneath. Length of the body 8 lines; of the wings 18 lines.

246. Chora curvifera, n. s. Fam. Ochracea-rufa, corpore subitus albo, alis anticis puncto maculaque exteriore discalibus e atomis nigris,
linea exteriore nigra duplicata subarcuata non obliqua, alis posticis pallidioribus.

Female. Ochraceous red. Body white beneath. Fore wings with a discal point and a large exterior discal spot composed of confluent black speckles; a more exterior, upright, double, very slightly curved black line. Hind wings much paler, whitish towards the base and along the interior border. Length of the body 9 lines; of the wings 20 lines.

Gen. Cєlena, Steph.

247. Cєlena? obstruca, n. s. Mas. Rufescenti-cinerea, palpis ascendensibus articulo 3° lanceolato, antennis subpubescentibus, alis anticis rufescentiibus, linea tribus fuscescentibus angulosus indistinctis, macula basali concava vitrea, reiformi e annulo duobus connexis albidis, punctis marginalibus nigris, alis posticis linea subtus fusca exteriore dentillata.

Male. Reddish cinereous, slightly iridescent. Palpi ascending; 3rd joint lanceolate, less than half the length of the 2nd. Antennae minutely pubescent. Abdomen and hind wings brownish cinereous; the former tapering, extending a little beyond the hind wings, with a long apical tuft. Legs rather slender; hind tibiae with four very long spurs. Wings moderately broad. Fore wings mostly reddish; interior, exterior, and submarginal lines brownish, zigzag, indistinct; a concave, vitreous, but not hyaline spot in the disk near the base; reiform mark forming two whitish connected ringlets; costa with some whitish points near the tip; marginal points black. Hind wings beneath with a brown denticulated exterior line. Length of the body 6 lines; of the wings 12 lines.

Fam. Caradrinidæ, Guén.

Gen. Amyna, Guén.

Brown, mostly cinereous beneath. Head wanting. Legs black-speckled; hind tibiae with one spur of each pair very long. Fore wings with the interior, exterior, and submarginal lines dark brown, denticulated, very indistinct; reiform mark forming a cinereous subcostal ringlet, behind which there are three white points. Hind wings, with the fringe of the exterior border, white in front and towards the interior angle; under side with a blackish discal dot, and with blackish points accompanying a lunulate brown exterior line. Length of the body 6 lines; of the wings 16 lines.
Fam. HADENIDÆ, Guén.

Gen. DIANTHÆCIA, Boisid.

249. DIANTHÆCIA SCRIPTIPLENA, n. s. Fæm. Obscure fusca, palpis porrectis, alis anticis lineis albidis et cervinis undulatis aut denticulatis, gutta discali alba elongata, striga marginali obliqua testacea, lunulis marginalibus nigris, strigis subtus albidis submarginalibus.

Female. Dark brown. Palpi porrect; 3rd joint of the palpi elongated-conical, about one-third of the length of the 2nd. Abdomen, hind wings, and underside cinereous brown. Fore wings with whitish and fawn-coloured transverse lines; interior lines deeply undulating; exterior lines denticulated; a white elongated discal dot; an oblique testaceous marginal streak; marginal lunules black; underside with a brown denticulated exterior line (which is continued on the hind wings) and with whitish submarginal streaks. Length of the body 8 lines; of the wings 18 lines.

Gen. OBANA, n. g.

Female. Body moderately stout. Proboscis short. Palpi porrect, extending rather beyond the head; 2nd joint rather broad; 3rd lanceolate, less than half the length of the 2nd. Antenne simple. Abdomen keeled, not extending beyond the hind wings. Legs moderately stout; hind tibia with one of the apical spurs very long. Wings moderately broad; exterior border slightly excavated in front. Fore wings somewhat rounded at the tips; costa straight; exterior border rather oblique hindward; interior border fringed opposite the exterior line.

Allied to DIANTHÆCIA.

250. OBANA PULCHRILINEA, n. s. Fæm. Obscure ochracea, subitus cinerea, alis anticis nigro-fuscis, linea argentea duplicata serpentina, dimidio basali obscurae ochraceae, striga marginalis alba obliqua, linea submarginalis argentea interrupta nigro marginata, alis posticis cupreo-fuscis.

Female. Head and thorax dark ochaceous. Abdomen and underside cinereous. Fore wings blackish brown, adorned with a double very meandering silvery line; nearly half the basal half obliquely dark ochaceous; an oblique white streak on the middle of the exterior border; submarginal line silvery, interrupted, bordered with black. Hind wings cupreous brown, with a cinereous shining fringe. Length of the body 4½ lines; of the wings 12 lines.
Gen. Hadena, Treit.

251. Hadena duplicilinea, n. s.  Fem. Rufescenti-fusca, palpis erectis articulo 3o lineari longissimo, alis vix denticulatis, alis anticas lineis quatuor undulatis (duabus duplicatis) lituris costalibus lunulisque marginalibus nigris, spatio marginali albido consperso, alis posticis fuscis cincero lineatis, lunulis marginalibus fuscis albido marginalis.

Female. Dark-reddish brown. Abdomen and underside paler. Pal unusually long, rising a little above the head; 3rd joint linear, nearly as long as the 2nd. Abdomen hardly extending beyond the hind wings. Hind tibiae with very long spurs. Wings moderately broad; exterior border hardly dentated. Fore wings with black costal marks, with white points near the tip of the costa, with black marginal lunules, and with four irregular undulating black lines; interior and exterior lines double; space about the exterior border irregularly and interruptedly whitish-speckled. Hind wings brown, with some cinereous lines, of which the submarginal one is most distinct; marginal lunules brown, whitish-bordered. Length of the body 6 lines; of the wings 14 lines.

Female. Dark ferruginous brown. Palpi rising a little higher than the vertex; 3rd joint linear, rounded at the tip, about half the length of the 2nd. Antennae very minutely pectinated. Abdomen and hind wings brownish cinereous, the latter with a black discal spot on the under side. Fore wings with black marks along the costa, and with interrupted black lines which are composed of lunules; a black patch in the disk hindward near the base, and a larger external fawn-coloured patch near the costa, the latter containing two black points; marginal lunules black. Length of the body 9 lines; of the wings 20 lines.

Gen. Data, n. g.

Fem. Corpus robustum. Proboscis distincta. Palpi validi, oblique ascendentes, verticem non superantes; articulus 3o linearis, 2o dimidio non longior. Antennae glabrae. Abdomen alas posticas superans. Pedes validi, densissime pilosi; tibiae posticae calcarius quatuor lon-
gissimis. *Alæ* anticae apice subrotundatae, costa recta, margine exteriori convexo.

**Female.** Body robust. Proboscis distinct. Palpi stout, obliquely ascending, not rising higher than the vertex; 3rd joint linear, rounded at the tip, about half the length of the 2nd. Antennae smooth. Abdomen extending somewhat behind the hind wings. Legs stout; posterior femora and tibiae most densely clothed; hind tibiae with four very long spurs. Wings moderately broad. Fore wings slightly rounded at the tips; costa straight; exterior border convex, dentate. Allied to Ancara.

255. **Data Thalpophiloides**, n. s. *Fam.* Obscure rufescenti-fusca, abdomine pallide flavo apicem versus rufescenti-fusco, alis anticas fascis nebulosus nigricantibus, lineis tribus abidis undulatis, spatio marginali glaucescente consperso, puncto discali albo, alis posticae pallide flavis margine latissimo ferrugineo.

**Female.** Deep reddish brown, paler beneath. Abdomen pale yellow, reddish brown towards the tip. Fore wings with blackish-mottled bands; basal, interior, and exterior lines whitish, more or less undulating; marginal space speckled with bluish white; discal point shining white; three white points near the tip of the costa; fringe with a pale line opposite each vein. Hind wings pale yellow, with a very broad ferruginous border. Length of the body 8 lines; of the wings 18 lines.

**Gen. Barasa, n. g.**

**Male.** Body rather stout. Proboscis distinct. Palpi ascending, rather long, hardly curved, rising higher than the vertex; 3rd joint linear, rounded at the tip, nearly as long as the 2nd. Antennae minutely setulose and pubescent. Abdomen extending a little beyond the hind wings. Legs rather stout; hind tibiae with four very long spurs. Wings moderately broad. Fore wings rounded at the tips; costa straight; exterior border convex, moderately oblique; interior border with a tuft of very long hairs.

256. **Barasa Acronyctoides**, n. s. *Mas.* Alba, subitus cinerea, thorace fascia cinerea, alis anticas cinereo ex parte tinctis, lineis duabus nigris, 1a incompleta angulata, 2a undulata denticulata, linea submarginali nigriscante angulosa, punctis marginalibus nigris, litiris duabus costalibus duabusque discaliibus nigriscantibus.

**Male.** White, cinereous beneath. Thorax squamous, with a cinereous
band. Abdomen slightly cinereous, tinged with zeneous. Fore wings partly tinged with cinereous; this hue mostly towards the tips; interior and exterior lines black; the 1st very incomplete, forming an acute angle; the 2nd undulating and denticulated; submarginal line blackish, deeply zigzag; marginal points black; fringe with brown marks; costa with two blackish marks, one at the base, the other before the middle, each of them separated by a narrow interval from a blackish mark in the disk. Hind wings slightly iridescent. Length of the body 7 lines; of the wings 16 lines.

**Gen. Cædesa, n. g.**

**Fæm.** Corpus robustum. Proboscis distincta. Palpi lati, compressi, oblique ascendentes; articulus 3\textsuperscript{a} longiconicus, 2\textsuperscript{a} dimidio non longior. Antennæ glabrae. Abdomen longiconicum, alas posticae per-paullo superans. Pedes breves, validi; tibiae posteriores densissime pilose; tibiae posticae quadrarcalare. Ailæ anticae vix acutæ, costa recta, margine exterio rece convexo perobliquo.

**Female.** Body stout. Proboscis distinct. Palpi broad, compressed, obliquely ascending; 3rd joint elongate-conical, about half the length and breadth of the 2nd. Antennæ smooth. Abdomen elongate-conical, extending very little beyond the hind wings. Legs short, stout; posterior tibiae very thickly pilose; hind tibiae with four long stout spurs. Wings moderately broad. Fore wings hardly acute; costa straight; exterior border convex, very oblique.

Allied to Polia.

**Female.** Olive-green, cinereous beneath. Palpi mostly black. Thorax and abdomen black-speckled. Tibiae black at the base and at the tips; tarsi black, with white bands. Wings with a black-marked fringe. Fore wings with eight undulating and dentate black lines; space between the 1st line and the 2nd, and between the 7th line and the 8th, broader than that between any two of the other lines; middle part with black speckles, some of which are confluent; orbicular mark forming a large ringlet; reniform mark of the usual shape, black-pupilled, white-bordered; submarginal line partly bordered with white, emitting two broad black streaks to the exterior border. Hind wings brown, white towards the base. Length of the body 5 lines; of the wings 12 lines.

**Gen. Seria, n. g.**

**Mas.** Corpus sat robustum. Proboscis brevis. Palpi parvi, angulati.
Antennae contortae, dilatatae, spatulatae, apice serratae. Abdomen alas posticas vix superans. Pedes validi; tibiae postice pilis longissimis dense vestita. Ala antice sat angustae, apice subrotundae, costa recta; margine exterioire perobliquo.

Male. Body moderately stout. Head with a prominent acute frontal tuft. Proboscis short. Palpi small; 2nd joint obliquely ascending; 3rd porrect, less than half the length of the 2nd, with which it forms a slight angle. Antennae somewhat spiral, dilated from the base to one-third of the length, beyond which they are more dilated and somewhat cup-shaped; apical part serrate. Abdomen hardly extending beyond the hind wings. Legs stout; hind tibiae thickly clothed with very long hairs; spurs of moderate length. Wings rather narrow. Fore wings slightly rounded at the tips; costa straight; exterior border very oblique. This genus seems to connect the Hadenidae with some of the genera of the Herminiae.

258. SERRA CYATHICORNIS, n. s. Mas. Rufescens, antennis ex parte nigris, alis antice lineis tribus indistinctis denticulatis nigricantibus, linea submarginali e guttis nigricantibus, reniformi ex annulis duobus connexis cinereis, alis posticus seneo-fuscis.

Male. reddish, with a cinereous tinge beneath. Antennae with the cup-shaped part black. Fore wings with three indistinct blackish denticulated lines; submarginal line formed of blackish dots; reniform mark composed of two cinereous connected ringlets with blackish disks, the fore one much smaller than the hind one. Hind wings seneous brown; fringe cinereous, shining. Length of the body 5 lines; of the wings 6 lines.

Gen. NEBRISSA, n. g.

Male. Body thick. Proboscis moderately long. Palpi erect, rising as high as the vertex; 3rd joint conical, less than one-fourth of the length of the 2nd. Antennae very minutely crenulate. Abdomen depressed, extending somewhat behind the hind wings; apical tuft compressed. Legs stout, pilose; hind tibiae with one spur in each pair full twice the length of the other. Wings moderately broad. Fore wings rounded at the tips; costa straight; exterior border very slightly convex, hardly oblique. This genus hardly belongs to the Hadenidae.

259. NEBRISSA BIMACULA, n. s. Mas. Cinereo-albida, subiridescens, palpis extus fuscis, alis antice nigro subconspersis, lineis tribus den-
ticulatis incompletis puncto discali lineaque submarginali nigris, macula submarginali nigrante, spatio marginali subrufescente.

**Male.** Cinereo-whitish, slightly iridescent. Second joint of the palpi brown on the outer side. Fore wings thinly black-speckled; basal, interior, and exterior lines black, denticulated, slender, incomplete; a black discal point representing the orbicular mark; submarginal line composed of black points, contiguous to a large blackish spot; marginal space with a reddish tinge; marginal points black. Hind wings more whitish. Length of the body 6 lines; of the wings 12 lines.

**Fam. XYLINIDÆ, Guén.**

**Gen. XYLINA, Ochs.**

**Female.** Ferruginous red, paler beneath. Palpi obliquely ascending; 3rd joint elongate-conical, full one-fourth of the length of the 2nd. Abdomen reddish cinereous, keeled. Fore wings with the black transverse lines much interrupted, mostly composed of elongated points; marginal points black; fringe with blackish marks; an irregular and interrupted black stripe along the interior border. Hind wings cupreous brown; fringe with a cinereous tinge; under side with a rather large dark-brown discal spot. Length of the body 7 lines; of the wings 16 lines.

**Female.** Cinereous, rather slender. Body and fore wings tinged with wood-colour. Third joint of the palpi nearly as long as the 2nd. Abdomen keeled. Wings broadly fringed. Fore wings somewhat rounded at the tips; costa hardly convex, with some blackish points; exterior border moderately oblique; a broad brown middle stripe extending along the whole length, bordered in front by a white line. Hind wings broadly and diffusely bordered with pale brown. Length of the body 4½ lines; of the wings 10 lines.

262. *XYLINA PERVERSA, d. s.* *Mas.* Albida, fusco conspersa, antennis pubescentibus, tibiis fimbriatis, alis anticus ex parte sublignicoloribus, strigis duabus parvis discalibus lunulisque marginalibus nigris, his albido marginatis, fimbria nigricante albo notata, alis posticus cinereo-fuscas.

**Male.** Whitish. Head, thorax, and fore wings speckled with brown. Palpi slightly ascending; 2nd joint broad, pilose; 3rd conical, not
more than one-fourth of the length of the 2nd. Antennæ distinctly pubescent. Abdomen extending a little beyond the hind wings. Tibiæ fringed; hind tibiae with four long spurs. Fore wings tinged here and there with pale wood-colour; speckles in some parts confluent; two short black discal streaks; marginal lunules black, whitish-bordered; fringe blackish, with a white mark opposite each lunule. Hind wings cinereous brown. Length of the body 5 lines; of the wings 12 lines.

Gen. Batracharta, n. g.

Male. Body robust. Proboscis short. Palpi long; 2nd joint obliquely ascending; 3rd more prox erect, linear, shorter than the 2nd, with which it forms a slight angle. Antennæ stout, long, simple. Abdomen long, lanceolate, keeled, slightly crested, extending much beyond the hind wings. Legs stout; tibiae fringed; hind tibiae with four long spurs. Wings elongate. Fore wings much rounded at the tips; costa straight; exterior border slightly convex, extremely oblique, interior border slightly excavated exteriorly.

263. Batracharta obliqua, n. s. Mas. Lignicolor, thorace nigrigante, alis antice vitta nigrigante lanceolata, spatio discale interiore ferrugineo nebuloso, alis posticis pallide fusce, macula discale subtus nigrigante.

Male. Wood-colour. Thorax blackish, except in front. Fore wings with a blackish cinereous-varied stripe, which occupies the whole of the base, and tapers irregularly to four-fifths of the length of the costa, whence it is continued in an irregular dentate line along the tips and along the interior border; exterior discal space clouded with ferruginous. Hind wings pale brown; under side cinereous, with a large blackish discal spot. Length of the body 9½ lines; of the wings 20 lines.

Fam. Hæmerosidae, Guén.

Female. White. Palpi blackish on the outer side; 2nd joint slightly curved; 3rd lanceolate, a little shorter than the 2nd. Abdomen with a pale fawn-coloured tinge, extending for half its length beyond the hind wings. Fore wings blackish green in front, with denticulated black lines; the dark part widening from the base to the exterior border, where it nearly extends to the interior angle. Hind wings seneous brown. Length of the body 7 lines; of the wings 14 lines.

267. ARIOLA INCLUDENS, n. s. Mas. Alba, thorace fascia nigro-viridi, abdomine longissimo subtestaceo, alis anticus nigro-viridibus, vittis duabus albis ex parte connexis, 1a undulata, 2a informi marginali, alis posticis fuscis.

Male. White. Palpi like those of A. continua. Thorax with a blackish-green band. Abdomen slightly testaceous, very long, extending for more than half its length beyond the hind wings. Fore wings blackish green, with two partly connected white stripes; 1st stripe undulating, along the hinder part of the disk; 2nd stripe irregular, along the interior border. Hind wings brown. Length of the body 7 lines; of the wings 10 lines.

268. ARIOLA DEFLEXA, n. s. Mas et Fam.? Alba, thorace feminae postico nigro-viridi, alis anticus nigro-viridibus, spatio basali obliquo albo (fem. nigro-viridi plagiato), lineis duabus indistinetis denticulatis nigris albo notatis, costa subconvexa, alis posticis cinereo-fuscis.

Male. White. Palpi blackish, cinereous in front. Thorax partly with an ochraceous tinge. Abdomen cinereous, extending a little beyond the hind wings. Fore wings blackish green; basal part obliquely white, partly tinged with ochraceous; a black discal point and some traces of two black denticulated white-marked lines, one exterior, the other submarginal; costa slightly convex. Hind wings cinereous brown. Length of the body 5 lines; of the wings 11 lines.

Female. Thorax blackish green, except in front. Basal white part of the fore wings with a blackish-green disk. Length of the body 4½ lines; of the wings 11 lines.

Gen. DIGBA, n. g.

Male. Body rather slender. Proboscis distinct. Palpi porrect, hardly extending beyond the head; 3rd joint extremely minute. Antennae with scarcely perceptible pubescence. Abdomen hardly extending beyond the hind wings. Legs stout, smooth, not long; hind tibiae with four long spurs. Wings moderately broad. Fore wings slightly rounded at the tips; costa and exterior border very slightly convex, the latter slightly oblique.

*Male.* Luteous green, white beneath. Abdomen whitish green. Fore wings with an incomplete purplish discal ringlet. Hind wings white, semihyaline, iridescent. Length of the body 3 lines; of the wings 8 lines.
